

# FL-400

Series

Active Repeater Panel  
Model FL-4000/RP-A

FL-400 series of active repeater panels are remote controlled units of Intelligent Addressable Fire Alarm Control Panels. The repeater panels provides an extension to the operation of the fire alarm control panel.

It has 7" touch screen and keypad for operation.

Each repeater panel is connected to Fyrlaast Intelligent Addressable Fire Alarm Control Panel through network card and maximum of 16 repeater panels can be connected.

The fire alarm control panel supervises the connection between itself and repeater panel, approving the integrity of the cabling and indicating faults both on repeater panel and fire alarm control panel.

The repeater panels requires an external power supply of 24V DC to operate. Power may be taken from the auxillary supply of the main control panel or from any other suitable DC power supply.

## Features and Benefits

- Using advance microprocessor technology
- Enhance user interface with Touch screen LCD and keypad access
- Support real time visual algorithm
- General status LEDs
- Controls for system reset, accept, mute, silence alarm
